

Identification and quantification of preservative chemicals in common household products

Report Template

Your report should contain the following information and be no more than 4 sides of A4 (excluding the flow diagram). There are no individual word limits but the page limit is strict. The report must be word-processed with appropriate use of tables and figures. Make use of information obtained from your laboratory work with that found through the pre- and post-laboratory exercises.

- Name
- Module Code
- Title
- A brief Introduction to preservatives in cosmetics, the controversy surrounding these preservatives, and the regulations relevant to their use in cosmetic products.
- A Step-by-Step Account of how you have investigated whether a selection of these common household products comply with the regulations. Refer to qualitative and quantitative aspects of the investigation and include calculations and results obtained from other groups.
- A Flow Diagram showing how the investigation evolved.
- A Summary Statement describing your overall results with a brief conclusion based on your main experimental findings.
- References – Use a format adopted by a Royal Society of Chemistry journal.

The assessment of the report will be as follows

- | | |
|------------------------|-------|
| • Introduction | (15%) |
| • Step-by-Step Account | (40%) |
| • Summary Statement | (15%) |
| • Flow Diagram | (20%) |
| • References | (10%) |

Identification and quantification of preservative chemicals in common household products

Author	Simon Belt, Guillaume Massé
Title	Parabens in household products
Classification	Laboratory Manuals - Chemistry
Keywords	ukoer, parabens, chemistry, analytical, HPLC
Description	Individual lab sheets - Student
